

Minneapolis, MN – HealthRate, an award-winning SaaS application specializing in comparing network contracted rates for high-cost medical cases such as transplants, CAR-T, and gene therapy, is proud to announce its integration with the Scientific Registry of Transplant Recipients (SRTR) quality data. Recently named Best in Show in the Emerge Innovation Experience Contest at HIMSS25 for its groundbreaking work in improving data and analytics capabilities in the payer category, HealthRate continues to lead the industry by incorporating SRTR's gold-standard transplant quality metrics into its platform.

This integration empowers HealthRate users to evaluate transplant providers not only by cost savings but also by critical quality measures, ensuring decisions that prioritize both value and patient outcomes.

What is SRTR?

The Scientific Registry of Transplant Recipients (SRTR) is a federally funded database that collects, analyzes, and publicly reports on the performance of all solid organ transplant programs and organ procurement organizations in the United States. Operating under contract with the Health Resources and Services Administration (HRSA) and in coordination with the Organ Procurement and Transplantation Network (OPTN), SRTR is recognized as the gold standard for transplant quality metrics due to its comprehensive, independent, and publicly accessible data.

SRTR monitors transplant quality through Program-Specific Reports (PSRs), issued twice yearly. These reports evaluate each transplant center and organ procurement organization (OPO) on key measures, including:

- One-year patient and graft survival rates
- Waitlist mortality rates
- Transplant rates
- Donor organ utilization

Using advanced statistical modeling for risk adjustment, SRTR ensures fair comparisons across centers, making it a trusted resource for patients, clinicians, payers, and policymakers.

HealthRate's Integration of SRTR Data

HealthRate now incorporates SRTR's Program-Specific Reports into its transplant provider evaluations, providing users with actionable quality metrics alongside its robust cost data. This integration enables HealthRate users to balance cost-effectiveness with clinical quality, supporting value-driven decisions that optimize patient outcomes. For a deeper look at each provider's full performance and the methodology behind these metrics, complete reports are available on [SRTR.org](https://www.srtr.org).

Commitment to High-Quality Outcomes

“Health Rate is dedicated to ensuring high-quality outcomes for patients while delivering unparalleled transparency into healthcare costs,” said Tim Michaels, CEO of HealthRate.

“By integrating SRTR’s gold-standard quality data, we’re empowering our users to make informed decisions that align cost savings with exceptional care. This is a game-changer for payers, providers, and patients alike.”
